The William Alanson White Institute

The William Alanson White Institute of Psychiatry, Psychoanalysis and Psychology, incorporated under the provisions of the New York State Education Law on October 18, 1946, as a nonprofit Educational Corporation, is an association of psychoanalysts and other behavioral scientists, whose primary function is the training of resourceful psychoanalysts. The significant contributions of *Sigmund Freud* to the understanding of human behavior, and the vital pre- and post-Freudian developments of the study of personality find a place within the framework of its philosophy.

The curriculum takes note of the psychological, social and biological factors in human behavior. Taking as its basis the special contributions of two of its co-founders, *Harry Stack Sullivan* and *Erich Fromm,* it fosters the study of the human person as a social being, and of human behavior as social communication.

The Institute's program extends beyond the training of psychoanalysts. Its Continued Professional Education Division offers to a select professional public, courses in recent developments in psychoanalytic theory and the study of behavior. Its clinical therapeutic services provide low cost therapy to the community. Its Department of Research is concerned with basic studies of behavior within experimental and clinical settings.

In these manifold functions, the Institute expresses its faith that man, through the enhancement of his own capacities, may more efficiently cope with the fantastic problems of being simply human.
